

Node 04 + Repo

Updates Added

For this assignment, I updated the Cars table by adding an **Action** column with **Delete** and **Update** buttons.

Delete Button

The Delete button sends a DELETE request to the server using the Fetch API.

When clicked:

- The selected car is removed from the array
- The table reloads automatically
- The updated list of cars is displayed immediately

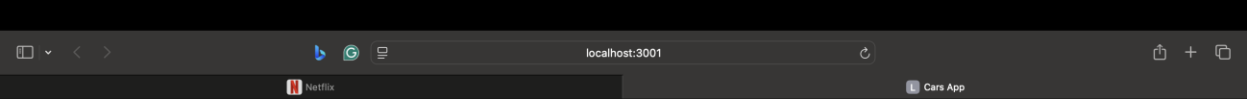

Update Button

The Update button uses prompt boxes to collect updated car information from the user.

When clicked:

- The user enters new values
- A PUT request is sent to the server
- The selected car is updated
- The table refreshes automatically with the new information

Update

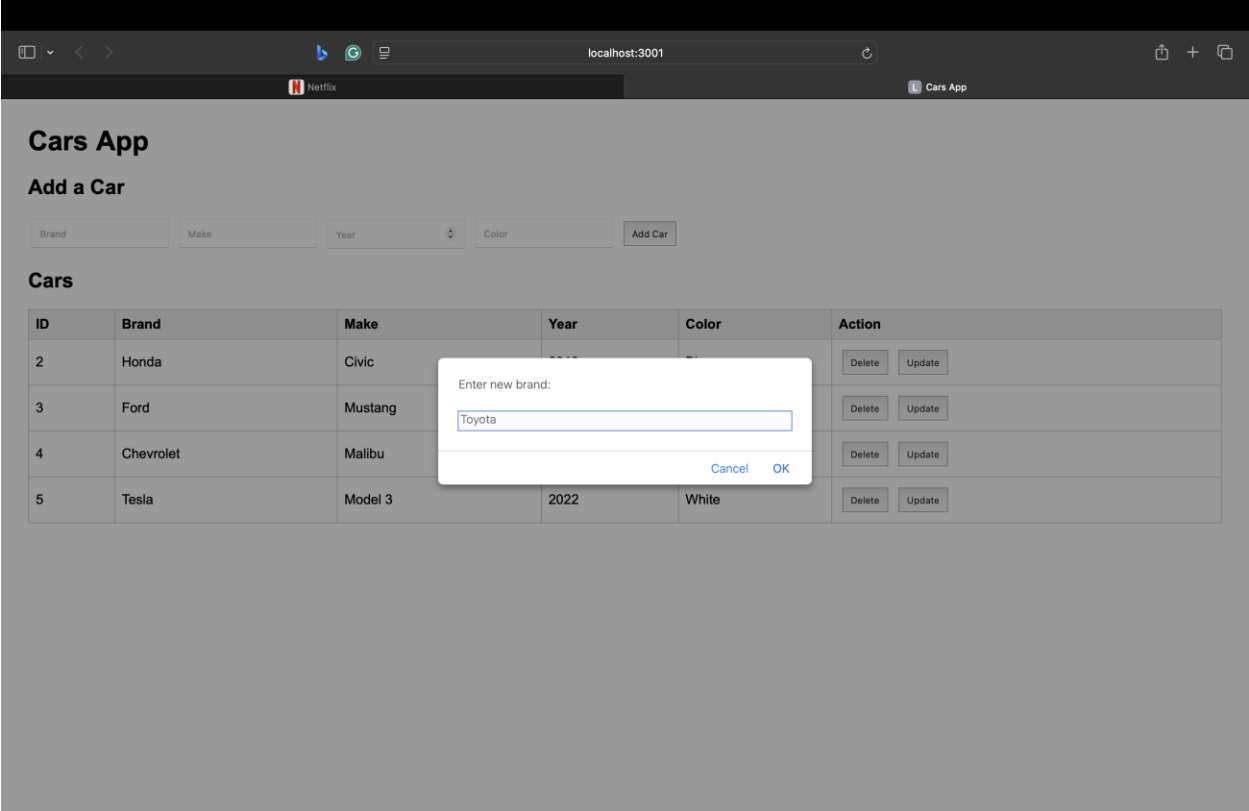

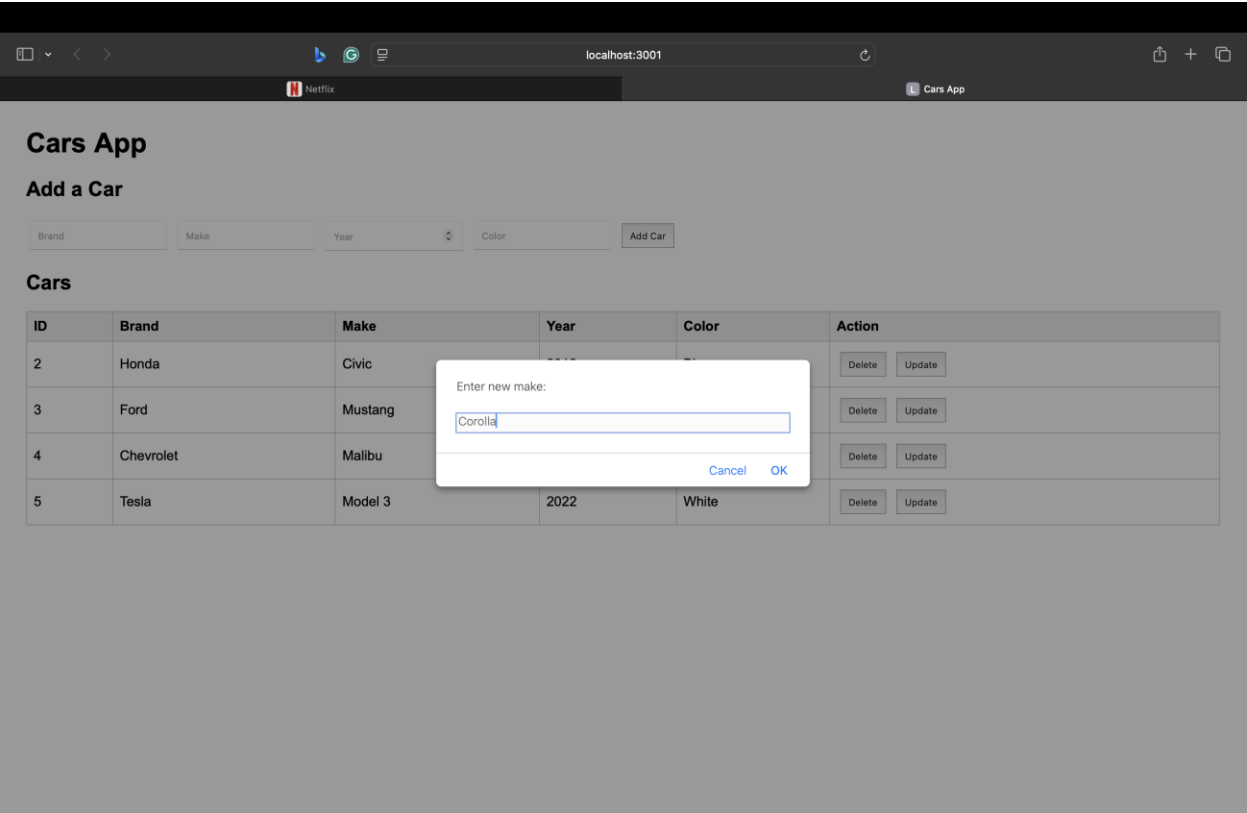

Cars App

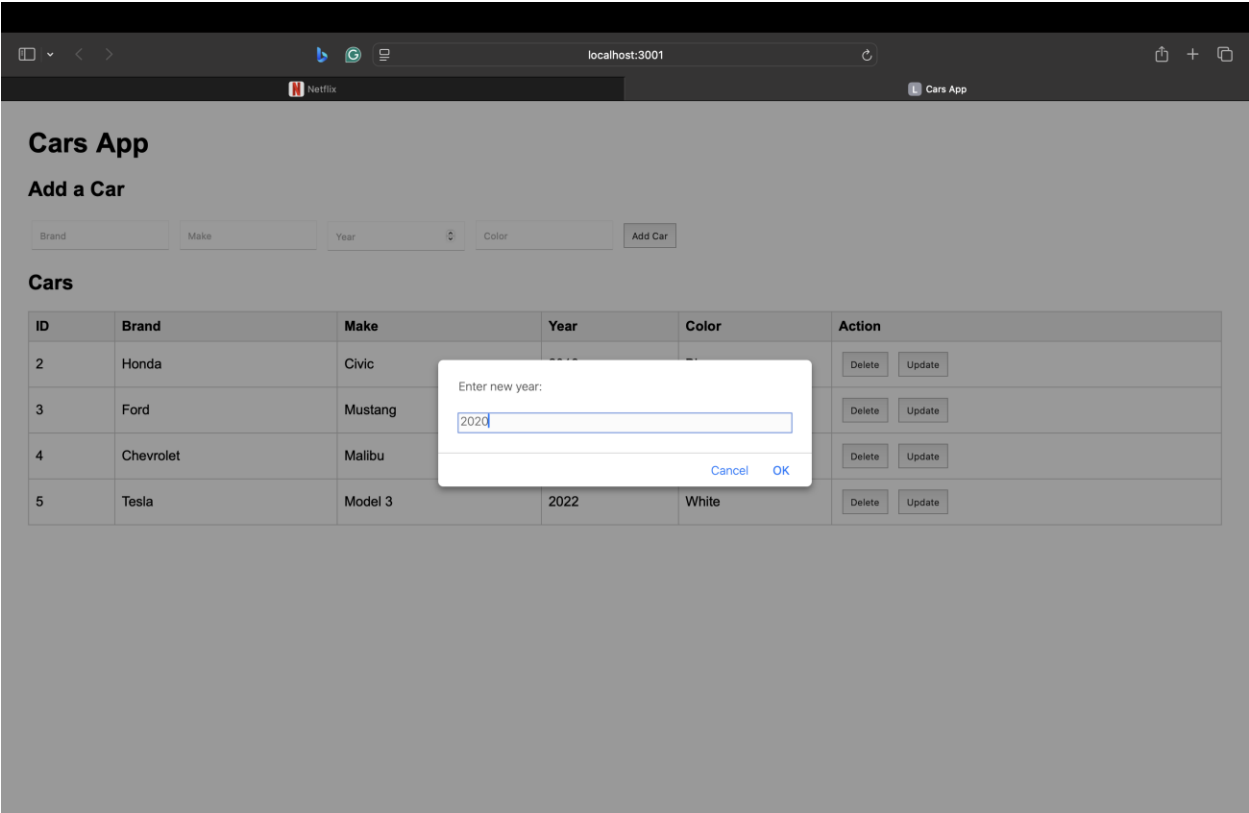

Add a Car

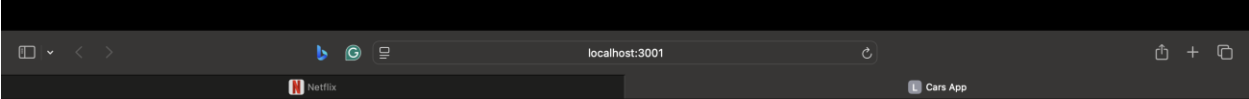

Cars

ID	Brand	Make	Year	Color	Action
